

SWCWB5 &
SWCWB5CB

Read and understand these instructions before attempting any operation of this Blaster Brush and retain for future reference!

HOW TO USE YOUR BLASTER BRUSH

- Mix car shampoo and warm water in a bucket to generate plenty of foam.
- Connect your Blaster Brush to a garden hose with (standard) hose connector (1). Ensure water flow is OFF (2).
- Twist (3) and adjust the telescopic pole to the desired length and re-tighten to secure.
- Turn on the tap and set the switch on your Blaster Brush to ON (2). Spray away surface dirt, debris and grime.
- Switch OFF (2). Dip the brush in soapy water and wash your car (or other item) one section at a time, working from the top, down. Wash the tyres and rims last.
- After washing each section, immediately switch ON (2) for a blasting rinse to avoid soapy streaks.

TIPS FOR THE PERFECT WASH EVERY TIME

- Do not clean with very hot water as this may damage the bristles.
- Only use a quality high foam car shampoo - and use plenty!
- Avoid cleaning with dishwashing liquid or detergent.
- Before use, it is essential to ensure bristles are FREE from grit to avoid scratches.
- Avoid leakage by ensuring all parts are securely screwed together before turning on the tap.
- Avoid using water pressure that is too high.
- Always give the car a blasting rinse first before brushing.
- After use, rinse bristles thoroughly under running water to remove excess soap.
- Store standing upright to avoid bristle damage. Make sure switch is set to ON.

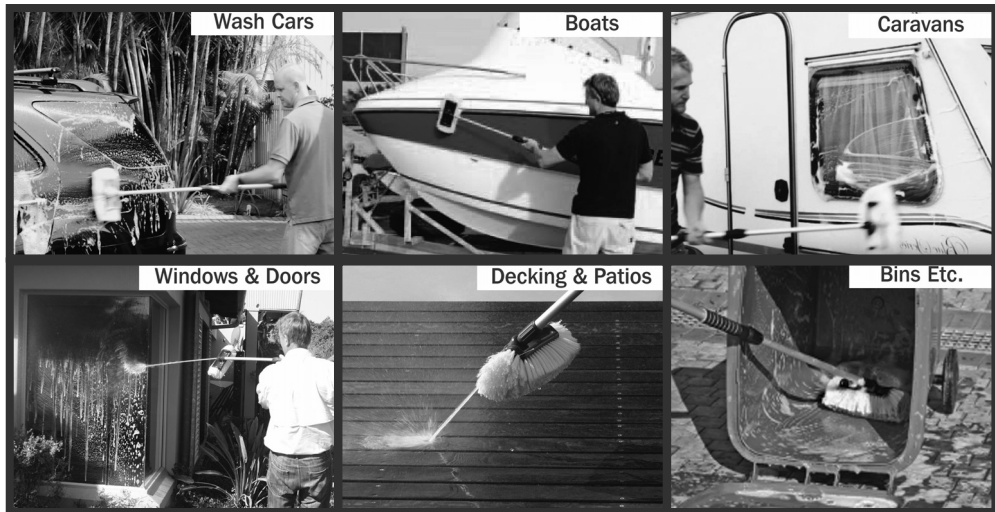

THE DIFFERENCE BETWEEN BLASTER BRUSH AND A FLOW-THROUGH BRUSH

The Blaster Brush may look exactly the same as a conventional flow through brush BUT:-

- Water is sprayed at a high pressure.
- The water exit point is completely separate from the soapy bristles.
- Water exits at a straight line to the handle; not at an angle.
- Operation is more convenient, with no need to switch hose accessories during use.

Ideal to...

Streetwize Accessories:

Unit 1, Royce Trading Estate, Ashburton Road West,
Trafford Park, Manchester M17 1RY
