Pressure Gauge

Instructions:

Check the manufacturers recommended specifications for your tyre pressure rating.

- Press GAUGE button. The message 0.0.0 will appear on the display.
- Now the GAUGE button can be pushed for unit changes (psi>bar>kpa>kgf/cm²>psi).
- Place the gauge nozzle onto the tyre valve. Press firmly to ensure no air is escaping. Wait for 1-2 seconds, remove gauge nozzle from valve and note tyre pressure in LCD display. Repeat on other tyres.
- The display will remain illuminated with the pressure reading for about 30 seconds. Then the gauge will shut down automatically to save power.
- The gauge can be manually turned off by pressing the GAUGE button for about 3 seconds. Note: You may continue to use the gauge even though the previous reading is still displayed.

Helpful Hints:

- If you observe an unusually low reading: Make sure no sound of escaping air can be heard. Also make sure you remove gauge from valve stem after reading locks on the display.
- If the tyre pressure is too high in any of the tyres, slowly release air by gently pressing on the the tyre valve with the edge of your tyre gauge.
- To clean the gauge, use a soft damp cloth. Do not immerse in or spray with water or other liquid cleaner.

Warning: For best results, check tyre pressures when the tyres are cold. Driving for prolonged high speeds can cause tyre pressures to rise. Taking pressure readings at this time can give you a false high reading. Check tyre pressures at least once a week, and adjust air as necessary. Consult your owners manual for the recommended pressure for your tyres.

THIS GAUGE IS INTENDED TO PROVIDE A GUIDE TO HELP DETERMINE A DROP IN PRESSURE IN YOUR TYRES. ONLY SOPHISTICATED AND REGULARLY CALIBRATED MEASURING EQUIPMENT CAN PROVIDE TOTALLY ACCURATE READINGS.

WARNING: KEEP COIN/BUTTON BATTERIES OUT OF REACH OF CHILDREN. SWALLOWING MAY LEAD TO SERIOUS INJURY OR DEATH WITHIN 2 HOURS. SEEK IMMEDIATE MEDICAL ATTENTION IF SWALLOWED.
