

Rechargeable Dehumidifier

PLEASE READ AND UNDERSTAND THESE INSTRUCTIONS BEFORE ANY USE OF THE DEHUMIDIFIERS - AND RETAIN FOR FUTURE REFERENCE.

This unit contains water glass technology crystals.

Water glass is a very absorbent substance that has an absorption rate much higher than traditional soluble humidity absorbing products. It is odourless and will not re-release moisture back into the air. This new water glass technology is the most efficient way to absorb excess moisture.

The “Recharging” nature of this product is simply to dry out the crystals when they indicate maximum moisture absorption (i.e. Pink).

As the crystals absorb water they change colour from BLUE to PINK. Simply plug in to begin the drying process, when the crystals are BLUE the unit is “Recharged”.

Please Note: There are NO illuminated LED's on this unit.

OPERATING INSTRUCTIONS

1. Check the moisture levels of the crystals in the window on the unit, if they are “Blue/Black” in colour, **recharging is NOT required.** If the crystals appear “Pink” follow steps 5 & 6 below.
2. To use this dehumidifier place the unit where you require moisture to be eliminated, please ensure the unit is not covered.
3. Periodically check the units (every 2-3 weeks), when the crystals indicate they are wet (i.e. Pink) they will have absorbed their maximum amount of water. The units will now need “re-charging” to dry-out.
4. Before Re-charging” shake the unit to separate the crystals.
5. Ensure the unit is on a stable surface when the unit is being re-charged and keep out of reach of children. **The power point is on the base so the unit, so it re-charges upside down.** Re-charge the unit in a suitable and a well ventilated location. The unit will heat up during the drying-out process.
6. Plug the charging cable in to the unit, then plug in to a mains plug socket for between 15-24 hours or until water glass crystals indicate they are dry (i.e. Blue), during charging periodically shake the crystals to ensure even drying, when drying is complete unplug the unit and replace the unit in the required position as previously.

Voltage: 230V ~ 60/50Hz

Power: 12 Watts

Temperature & Humidity: 20° to 40°C, more than 50% humidity.

WEEE

The WEEE symbol  on this product means that this unit should be ethically dismantled or recycled to minimise environmental impact. Please check with your local authority for more information.

For your own convenience, make these simple checks before calling the support/service line below.

1. Ensure the units are filled with moisture (i.e. Pink) before attempting ANY recharging?
2. If unit is displaying Blue crystals, they DO NOT need any re-charging.

If the unit does not heat up.

1. Is the unit plugged into a mains power point?
2. Is the fuse in mains plug OK?

IMPORTANT: ADDITIONAL SAFETY INFORMATION

Warning: This product is not intended for use by children or individuals with reduced physical, sensory, or mental capabilities unless supervised by a responsible adult. Small parts may present a choking hazard. Always keep out of reach of children.

If the supply cord is damaged, it must be replaced by the supplier or similarly qualified persons in order to avoid a hazard.
