Caravan Axle Wheel Lock

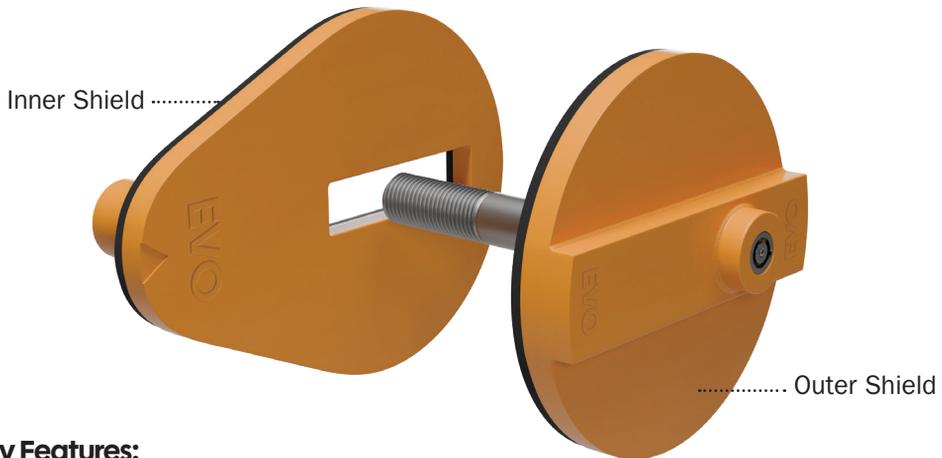

Introducing the Evo Caravan Axle Wheel Lock

The EVO Wheel Lock is a high-security device built to protect your caravan from theft. It attaches directly to a permanent receiver built into the wheel drum and has a bright orange finish, acting as a visible deterrent. **Using a caravan axle wheel lock MAY entitle you to a discount on your insurance premium (please contact your insurance company).** Before using your EVO Lock we highly recommend that you read through all the information in this document.

Product Overview

This device consists of two main components:

- 1. Inner Shield:** covers the wheel bolt and protects the alloy wheel.
- 2. Outer Shield with Locking Portion:** Screws through the inner shield into the receiver.

Key Features:

- **Robust Construction:** Crafted with 10mm composite steel.
- **Easy Installation:** Can be fitted in just over 20 seconds.
- **Visual Deterrent:** A bright orange finish is an added layer of protection.
- **Expertly Engineered:** Threaded connection secures to the caravan's axle receiver.
- **Locking Mechanism:** The unique patent pending design prevents caravan wheel rotation.

How the Evo Wheel Lock Works

- The lock fits into a receiver, which is a threaded bracket permanently fixed to the wheel drum; this is standard for most UK caravans since 2006.
- A protective cap covers the receiver when not in use. It must be removed before fitting the lock.
- Once attached, the locking portion drops into a groove within the inner shield, preventing the outer shield from turning.

PLEASE NOTE: To ensure smooth assembly and lasting protection, please apply grease generously to the contact area where the threaded outer shield passes through the inner shield. This helps maintain a precise fit and prevents rust, even if minor paint wear occurs due to the tight tolerance.

Installation Instructions

Step 1 - Prepare the Receiver

- Locate the receiver through the caravan wheel.
- Remove the protective yellow cap to reveal the threaded connection (Fig.1).
- Make sure caravan receiver thread is clean and well lubricated with grease or light oil.
- To avoid cross-threading, do not force the EVO into the receiver. Take care to align it correctly. If you feel resistance, stop and seek help from an expert before carrying on as the caravan receiver may be damaged.

Fig. 1

Step 2 - Position the Inner Shield

- Align the inner shield with the receiver, ensuring the small cylindrical portion fits over one of the wheel bolts (Fig.2).

Fig. 2

Step 3 - Attach the Outer Shield

- Place the outer shield over the inner shield.
- Screw the threaded shaft into the receiver until secure (Fig.3).

Fig. 3

Step 4 - Lock the Device

- Continue to turn until the outer and inner shields are very tight and the evo logos align down the middle of the shield.
- Push the locking portion down into place. There will still be a degree of side to side rotational movement.
- Check that the lock is firmly in position (Fig.4).

Fig. 4

Removal Instructions

- Use the key to raise the locking portion to release the outer shield.
- Unscrew the shaft from the receiver.
- Remove both shields and store the lock securely.
- Refit the protective cap onto the receiver.

Maintenance and Care

- Lightly lubricate the locking mechanism and the threaded portion every six months.
- Clean the lock if used in wet or dirty conditions.
- Store in a dry place when not in use.

Technical Specifications

Supplier Code	LW743
Product Name	EVO Caravan Axle Wheel Lock
Material	Steel, EVA
Finish	Powder Coated
Dimensions	19 x 14 x 14.5cm

Technical Support

If you require any technical support for your product within the warranty period, please contact us on:
