

Solar Lion Head Water Feature

Please read and understand these instructions before any use of this product and retain for future reference.

Remove all the product packaging and dispose appropriately. Check the product is undamaged.

Choosing the right location: An outdoor location with direct sunshine and where the solar panel of your light can receive at least 6 hours of sunshine each day is an ideal location for solar light. Shady locations will influence the batteries charge and may shorten the working time of the light at night time. The solar light should not be placed near lighting such as street light, which may cause the light to turn off, as there is a sensor inside to monitor brightness and control the light working. The solar light is ideal for night time lighting of the garden, lawn, patio, paths or wherever needed. You can also charge the lights outdoors then use as indoor illumination.

Precautions: Please note that the light is designed to work when ambience turns to dark. If there are strong light sources nearby then the lamp might be very dim or not work at all. Although the manufacturer has charged the battery, the electric levels will have dropped when you receive it. Please charge it for a full day to w.timize performance. The surface of the solar light must be kept clean, if not, this will influence the efficiency of charging.

Instructions for pump: To attach Water Pump, to water Feature In the Rear of the Feature is a Rubber Hose, please secure Hose to Water Pump securely Once done, place in the back of feature and ensure it is submerged under the Water Place solar Panel in Direct Sunlight
